Application

Our spring operated cable reels serve the industry for reliable electrification of equipment in motion; for automatic winding of flexible power- and control-cables.

Application areas

Portal- and Gantry Cranes, Dockside-, Ship- and Construction Cranes, Grabs and Magnets, Electric Hoists and other material handling -lifting -stacking and -storing equipment. They fully meet VDE and UVV safety requirements.

Special applications

- VAHLE Reels on board ships or in the tropics.
- VAHLE Reels in aggressive environments (galvanizing plants, pickling lines, sewage treatment systems).
- VAHLE Reels in explosionproof versions (slipringless).
- VAHLE Reels for Control-, Signal- and Highfrequency-Transmission.
- VAHLE Reels for Air, Liquids and Gases (Hose Reels).
- VAHLE Reels for handling steel ropes in travel distance-tracking systems and for grab stability on heavy cranes (Tag Line Reels).
- VAHLE Reels for Curves and for Endless Monorails with special swivel base.
- VAHLE Reels of the Ratchet Type with a lock mechanism for multi level machine tools and for push-button pendants.
- VAHLE Reels for Flatform Cable (especially in the palette stacking and machine tool industry).
- VAHLE Reels in Monospiral Version.

Vahle welcomes your inquiry on your particular application.

Electrical Properties of Sliprings

Standard sliprings are rated for 500 Volt AC and 600 Volt DC, Control Rings in block system for 230 Volts. Collector Ring Ampere capacities are for 100% nominal rating.

Protection Code

Slipring enclosures are designed to IP 55. Higher grade protection – available upon request.

Drive System

The Reel Drive is achieved via helical springs of high quality spring steel. Depending on the duty and type of service they will last about 120.000 working cycles.

Cable Payout

is normally following the technical information on pages 25 and 27 of this catalog. Other requirements can be fulfilled; add suffix A in the type designation for opposite hand rotation. (See model code on page 7).

Limit Switch Assemblies

for switching off travel and hoist motors with one or two safety windings on the reel are optional.

Accident Prevention

All moveable parts of the drive system, e.g. chaindrive are covered in accordance with the Accident Prevention Code. Therefore, the cable reels can be installed in work areas as well as traffic areas. Additional protective devices, such as a cover for the revolving reel body itself, are to be furnished and fitted at site.

Corrosion Protection

The all-steel construction of the VLF 155 to VLF 530 reel series is galvanized. All other reels come with one primer coat and one finishing paint of epoxy-resin RAL 7031 blue-grey varnish.

Installation Information

Installation instructions and operation manuals for commissioning advice and assistance are attached to each reel shipment.

Reel Capability

max. speed of travel or lift application: $v = 60 \text{ m/min.}$

max. travel acceleration: $a = 0,2 \text{ m/sec}^2$

max. lift acceleration: $a = 0,2 \text{ m/sec}^2$

Cable length

Reels are designed to handle a certain type and length of cable in a specific manner. Never use reels for more cable than outlined in the selection charts. Two safety windings are included on the reeling body.

Total cable length

The total cable length required results from maximum payout length plus reel installation height plus two safety windings plus free end length for connection.

Safety Advice

According to EEC-regulation 89/392/EWG rotating parts such as reel compartments must be protected against accidents.

Guarantee

We provide guarantee according to the general conditions of delivery for products and services of the electrical industry. The reel springs are as a wear part excluded from this guarantee.

Reeling cables

Reeling cables which correspond to the mechanical requirements should be used.

Factors in selecting cable for reel use, considering motor currents, required wire sizes and allowable voltage drop.

$$A = \frac{1,73 \cdot L \cdot I_G \cdot \cos\varphi}{\Delta U \cdot x} \text{ (mm}^2\text{)}$$

Legend to Formula:

A = Required Wire Size

(Conductor Cross Section in sq. mm)

L = Total Cable Length (m)

I_G = Total Ampere Load (Amps)

$\cos\varphi$ = Power Factor = approx. 0,8

x = Conductor Conductivity (Copper = 56)

ΔU = Allowable Voltage Drop (Volts)

Cable selection and determining wire size ampacity, considering permissible temperature rise

The reel selection charts are based on the cable data as per table No. 1, indicating continuous ampacity for 3-conductor open air installation with an ambient temperature of 30 °C. Use derating table No. 3 for other ambient temperature.

The continuous ampacities as per table No. 1 are only applicable to a limited extend for cables under reeling operation. The derating factors for multilayer service are shown in table No. 4. They are valid for permanently and fully spooled cables.

However, as many applications in practice do not have the cable fully spooled all the time, it is recommended to use an intermediate factor only. For monospiral winding refer to the same continuous ampacities than for one-layer operation. The continuous ampacities as per table 1 are suitable also for 4-core cables. Also 5-core arrangements are permissible, if one core is used as ground. If necessary consider the cable accumulation for dimensioning of the cables according to VDE 0100 §41 regulation.

The following derating factors (table No. 5) are nearly suitable for multi-core cables, depending on the quantity of cores.

The following derating factors (table No. 2) are valid for intermittent service in relation to the continuous ampacities for permanent load as per table No. 1.

Reel selection tables

for arrangement samples - random wrap, horizontal or vertical cable payout or steeply rising -

Table 1: Continuous cable ampacity (100% CD) for open air installation

Wire size (mm ²)	Ampere Capacity (A)	
	60 °C max. permissible temp. at conductors	80 °C max. permissible temp. at conductors
1,5	18	24
2,5	25	32
4	34	43
6	44	56
10	60	78
16	80	104
25	107	138
35	133	171
50	165	213

Table 2: Multiplier for intermittent service (according to manufacturers' instructions)

Wire size (mm ²)	at intermittent duty cycle of (according to manufacturers' instructions)			
	60%	40%	25%	15%
1,5	1,00	1,00	1,00	1,00
2,5	1,00	1,00	1,04	1,07
4	1,00	1,03	1,05	1,19
6	1,00	1,04	1,13	1,27
10	1,03	1,09	1,21	1,44
16	1,07	1,16	1,34	1,62
25	1,10	1,23	1,46	1,79
35	1,13	1,28	1,53	1,90
50	1,16	1,34	1,62	2,03

Table 3: Derating for other ambient temperature for open air installation

Ambient temp. °C	Correction factors										
	25	30	35	40	45	50	55	60	65	70	75
Cable for max. 60 °C	1,08	1,00	0,91	0,82	0,71	0,58	0,41	-	-	-	-
Cable for max. 80 °C	1,05	1,00	0,95	0,89	0,84	0,77	0,71	0,63	0,55	0,45	0,32

Table 4: Derating for multilayer service

No. of Cond. in service	1	2	3	4
Multiplier	0,76	0,58	0,47	0,40

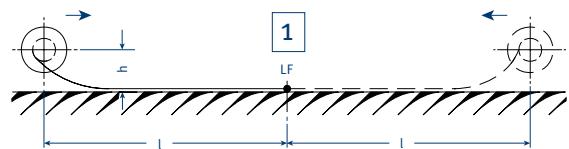

Table 5: Derating for multiconductor service

No. of Cond. in service	5	7	10	14	19	24	40
Multiplier	0,75	0,65	0,55	0,50	0,45	0,40	0,35

Typical Applications

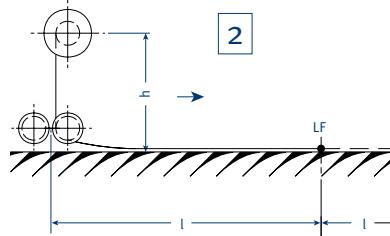

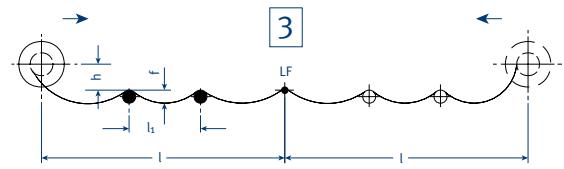

Reel on moving equipment

Cable on the ground or in a continuous tray
Horizontal Cable payout in one or two directions

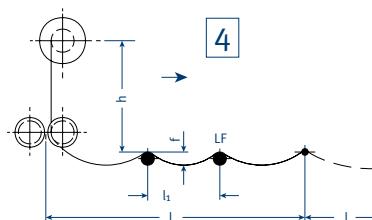

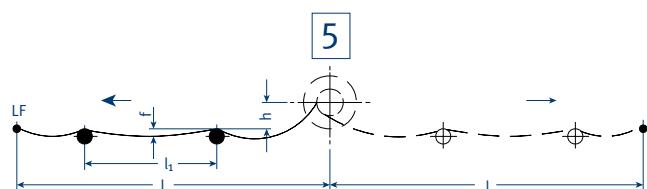

Reel on moving equipment

Cable on supports ($l_1 = 1\text{m}$), or rather rolls or rounded smooth supports ($l_1 = 1\text{ to }3\text{ m}$)
Horizontal Cable payout in one or two directions

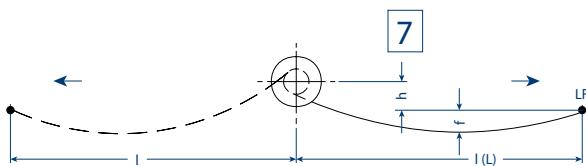

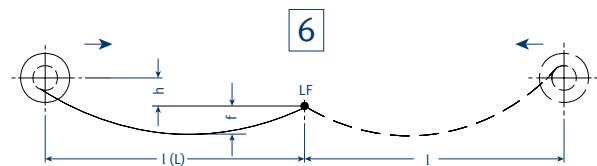

Reel stationary

(Cable fixpoint at moving equipment), horizontal cable payout in one or two directions on rolls or smooth supports ($l_1 = 3\text{m}$)

Reel on moving equipment (6) or Reel stationary (7) - (Cable fixpoint at moving equipment)

Free horizontal cable payout in one or two directions. For payout in one travel direction: „f“ is determining the loop depth if the suspended cable length „L“ is larger than „l“.

Legend to Drawings: (Examples 1-7)

l = max. operational length of cable (m)
(with cable payout in two travel directions = half travel length)

L = max. operational length [m] between reel and cable fixpoint

h = Installation height = distance from cable tray or cable fixpoint to reel center [m]

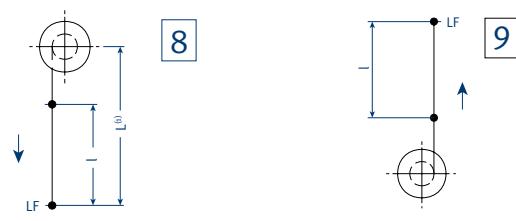

LF = Cable fixpoint

f = max. cable loop depth [m], relating to cable fixpoint "LF"

l_1 = Rolls or support distance [m]

Lifting operation

Cable payout vertical or steeply sloping (8)
Cable payout vertical or steeply rising (9)

Legend to Drawings (Examples 8 und 9)

l = operational length of cable
 L = max. sloping cable length (m). Also consider additional weight (e.g. control switch)
LF = Cable fixpoint

Note

For applications 2, 4, 5 and reels beyond the listed capacities please fill in the questionnaire on page 36 and consult your local agent or our factory.

1) The sloping cable length is relevant for cable reel selection.
Also consider additional weight (control switch).

Selecting a VAHLE Cable Reel

To select the right Vahle Reel from the Reel Selection Charts you must know the application (see page 6), the length and the type of cable (wire size, number of conductors, outside diameter, weight per meter).

Legend to Selection table:

l = max. operational length of cable

L = max. sloping cable length (m). („ L “ can coincide with max. operational reeling length „ l “).

h = max. mounting height = distance from cable tray or cable fix point to center of reel (m).

Measure „ h “ might be exceeded if ground clearance is sufficient (e.g. for cable payout in one travel direction).

Provide guide- or tension relief devices for cable payout in two travel directions or passing over the cable fix point.

LZ = No. of layers on reel (partly required for determination of cable cross section).

nv = required initial spring tension turns

n = max. operational and permissible turns for max. cable length „ l “.

Z = max. reel torque for cable payout (N)

f = max. cable loop depth relating to cable fixpoint "LF" (m)

Note

Initial spring tension nv can be increased when reducing the max. cable length to be handled. However, never exceed the total permissible turns $nv+n$.

220	17	16	901 700	901 701

1 Corresponds to former type 25 A or 30 A

2 Corresponds to former type 30 A (max. cross section 2,5 mm²)
For larger cross sections use 42 A brush assembly.

Questionnaire

Co.: _____

Date: _____

Fon.: _____

Fax: _____

E-Mail: _____

Internet: _____

1. For what type of moving equipment is the reel ?
A rough sketch based on the typical applications shown on page 5 of this catalog is extremely valuable.

2. Reel installation height h= _____ m

3. Travel distance of equipment _____ m

4. Cable payout from center from one end

5. What is the max. cable length on the reel?
Midway feed-point cuts the length of cable needed in half. l= _____ m

6. Type of Cable (number of conductors x wire size) _____ x _____ mm²

weight _____ kg/m

outside dia. _____ mm

7. Electrical load _____ kW

Voltage _____ V

Amps _____ A

8. Reduction factor due to cranes working simultaneously? _____ %

9. No. of Collector Rings required ?
(our slipring assemblies always include one ground) _____ pc.

10. Type of application ? (see page 7) No.

11. How many movements per hour? _____ times

12. Operating hours per day? _____ h

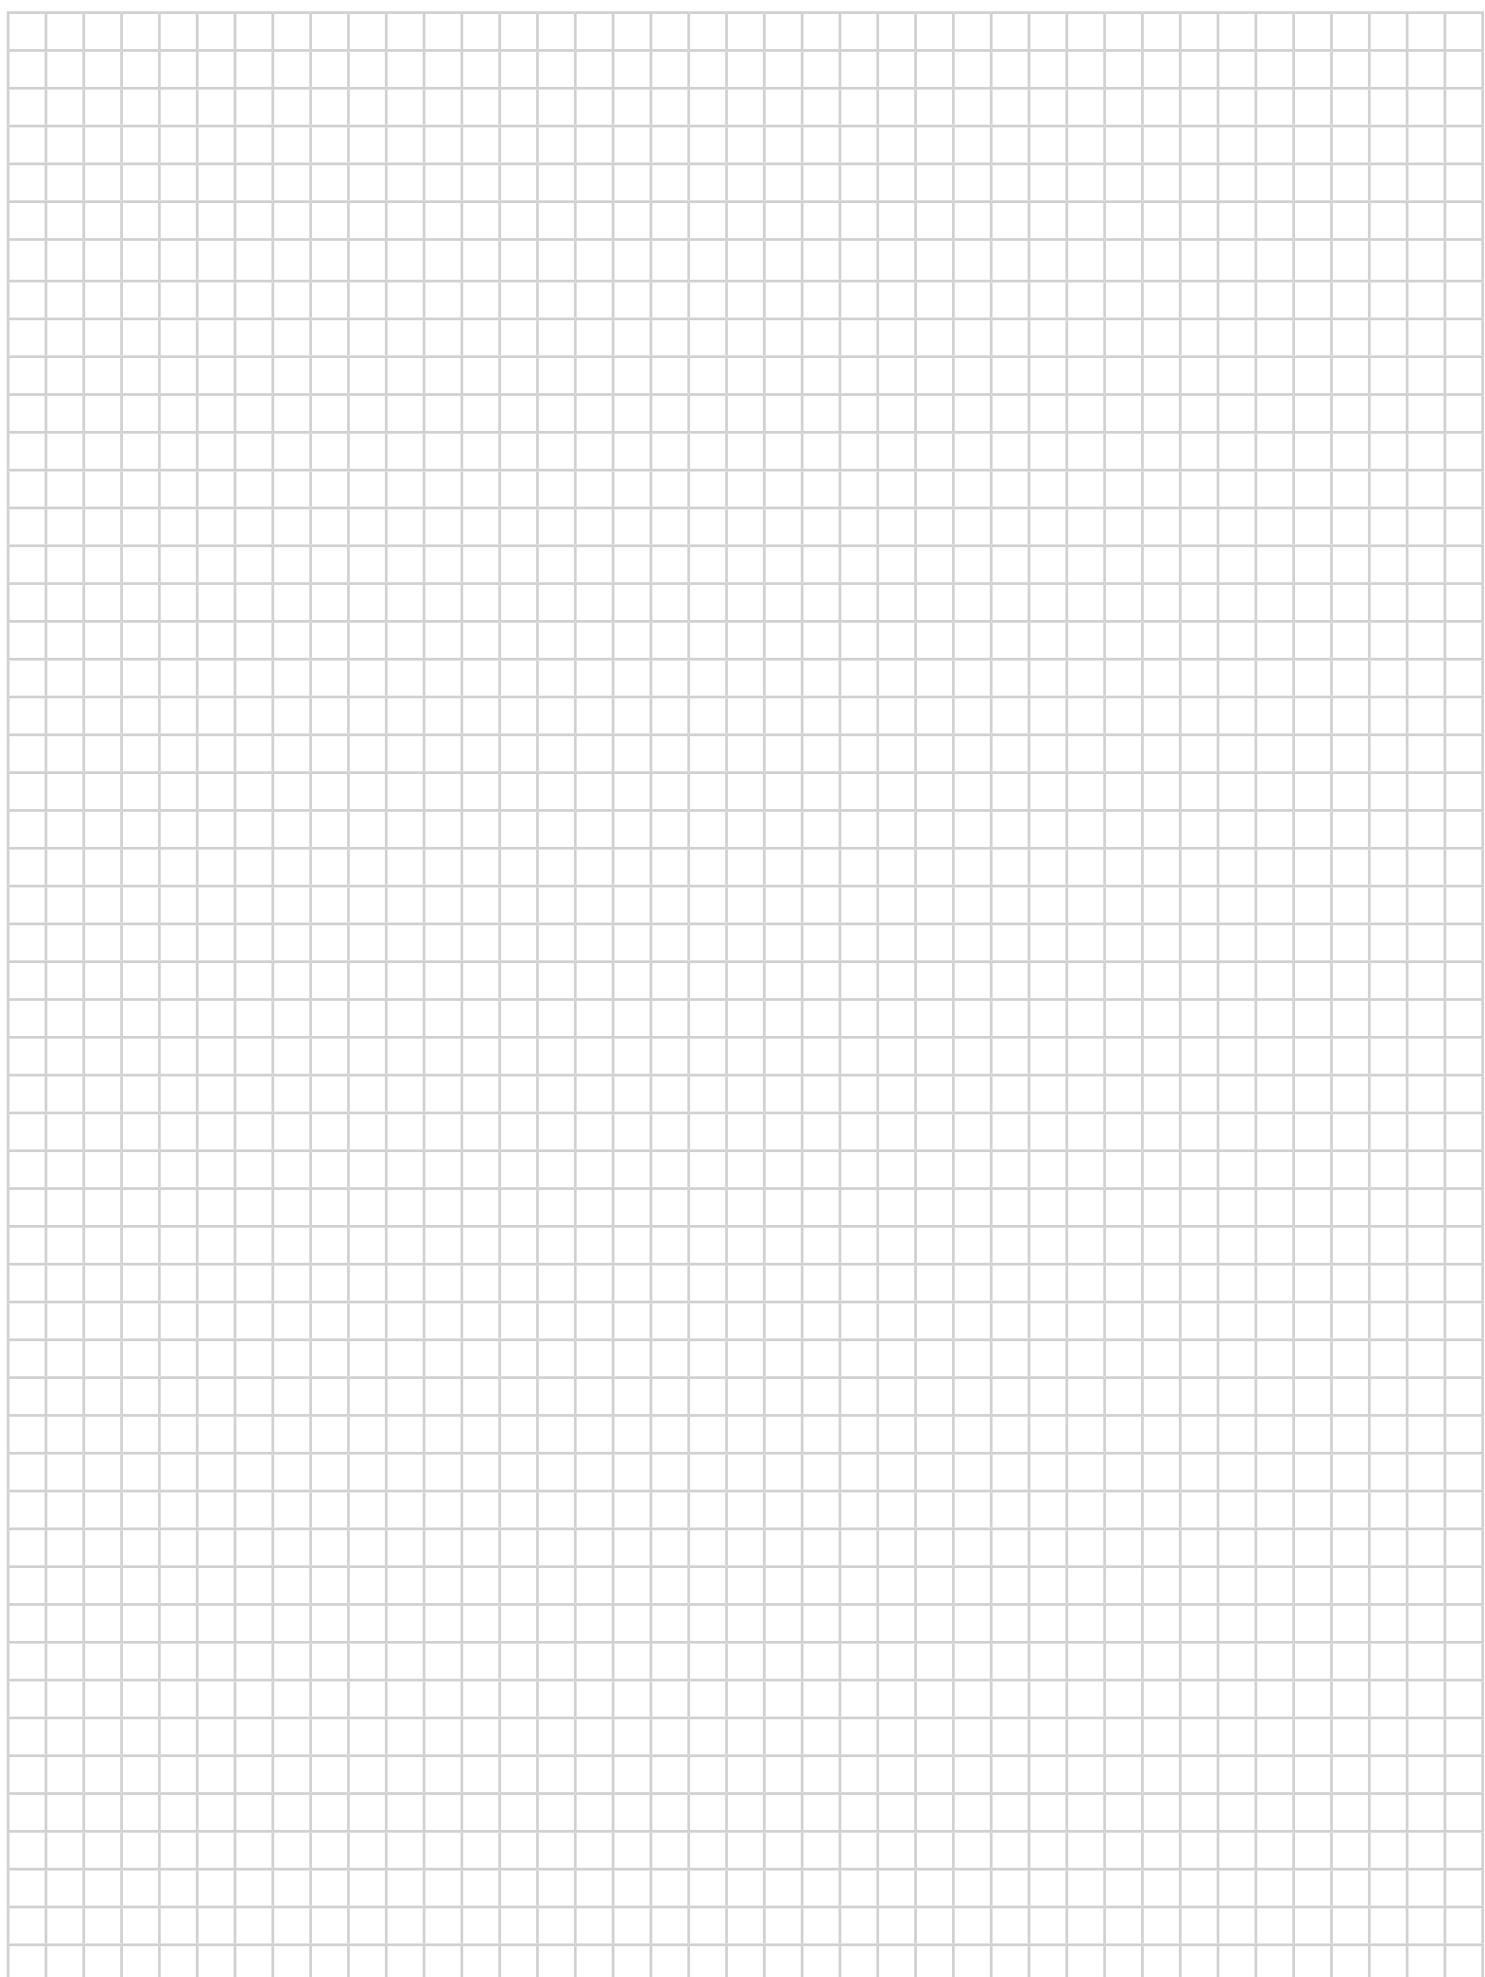

13. Maximum travel/lift speed? _____ m/min

14. Acceleration 0 to full in _____ sec

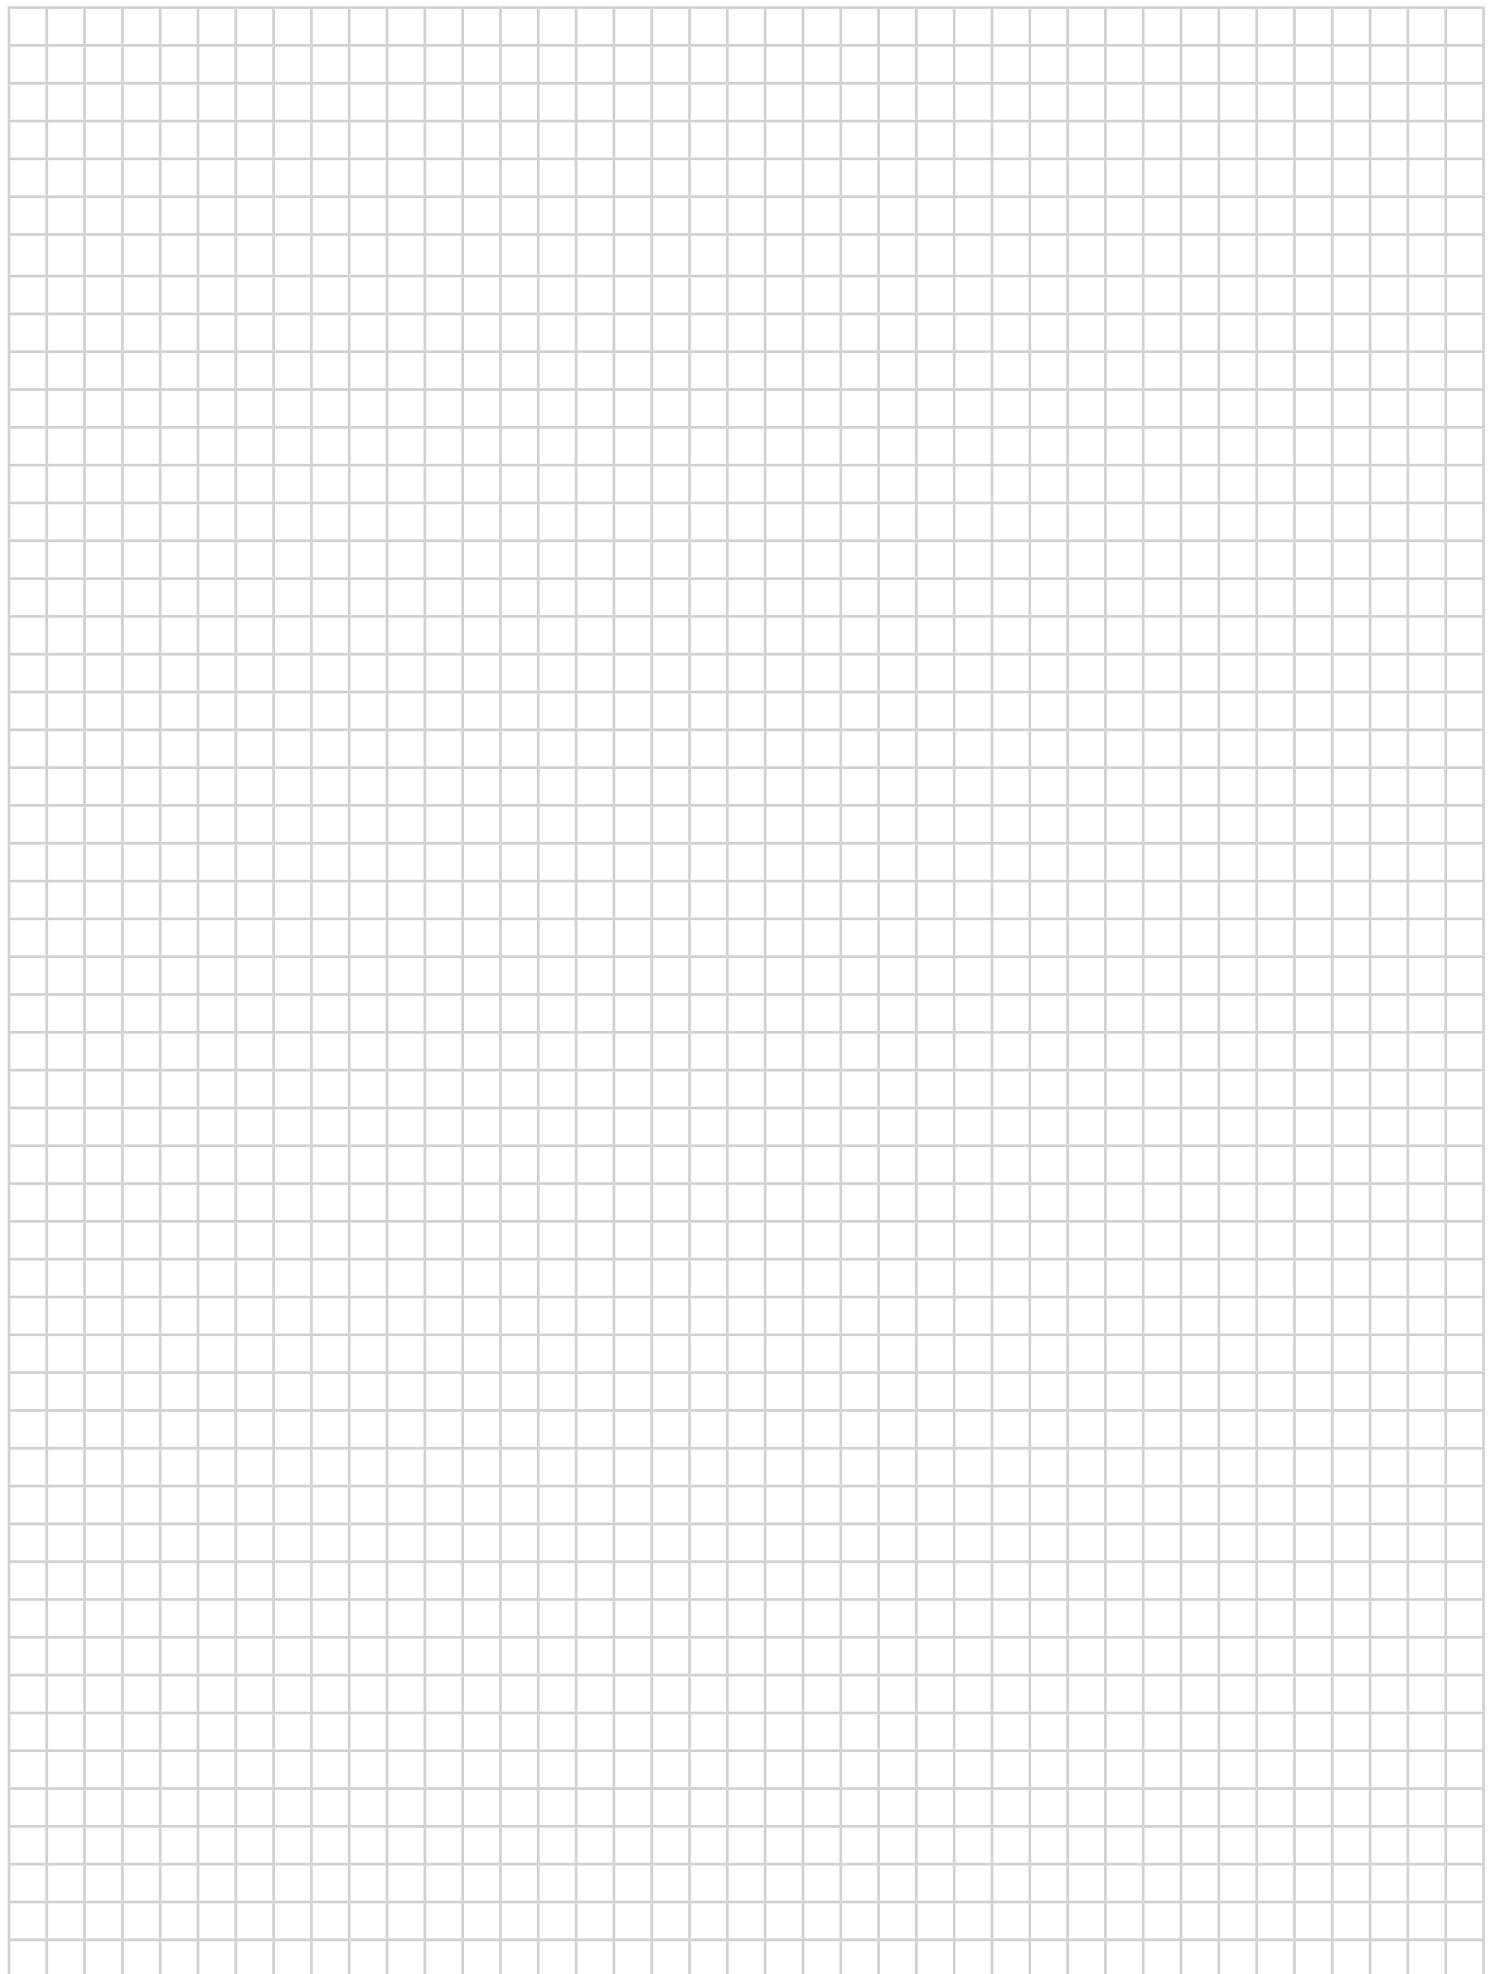

15. Acceleration rate _____ m/sec²

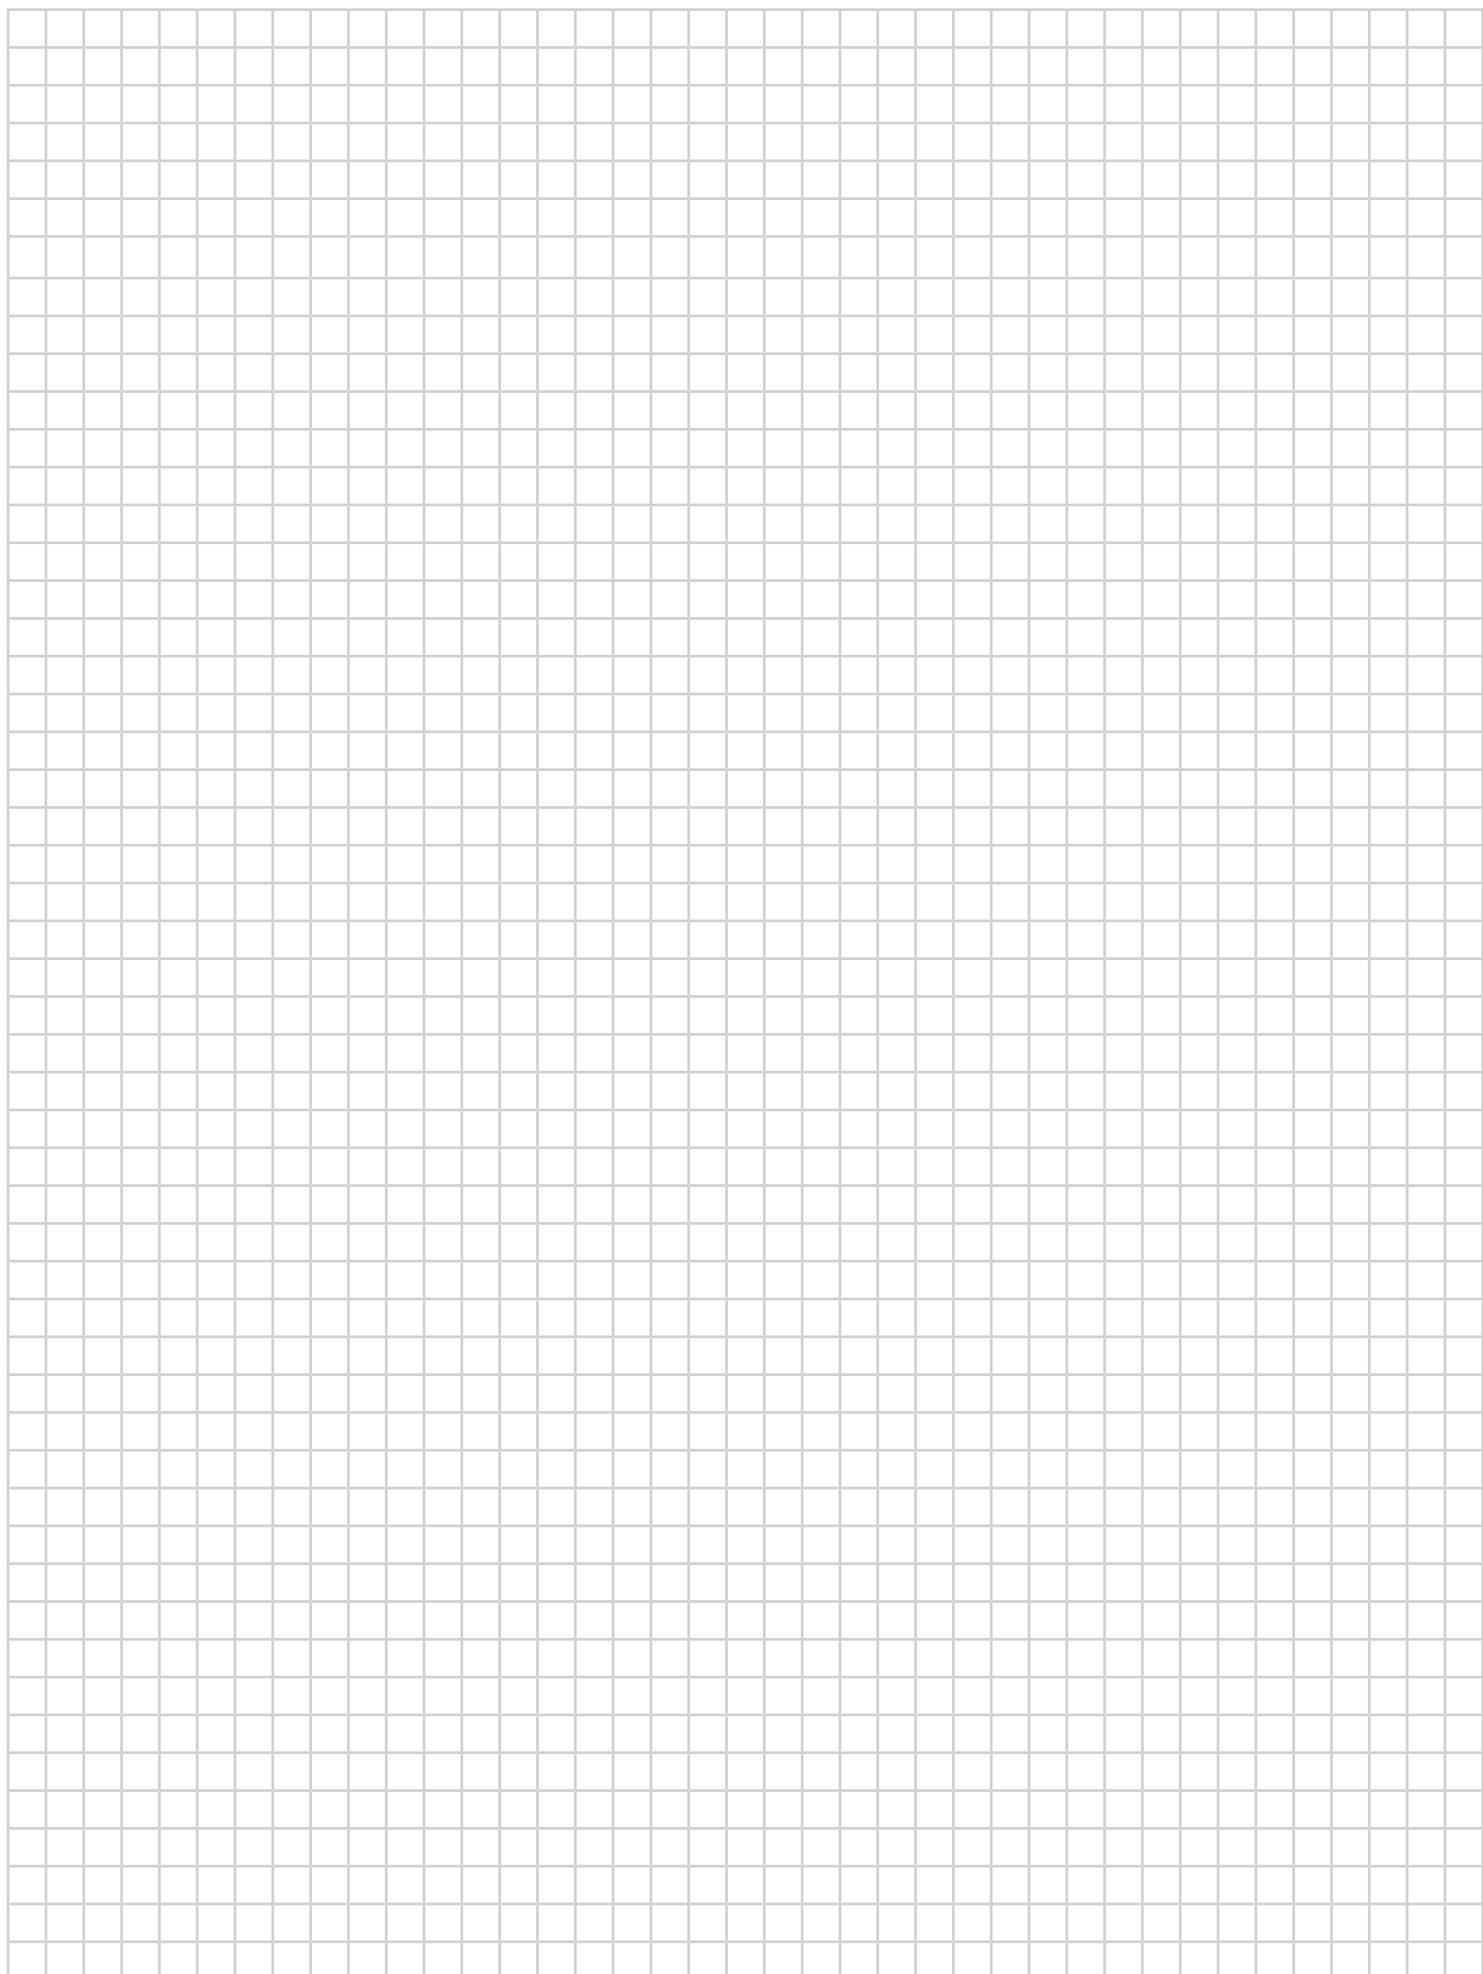

Motor data	Crane 1			Crane 2			Crane 3		
	Power kW/HP	Current Amps.	Duty factor %	Power kW/HP	Current Amps.	Duty factor %	Power kW/HP	Current Amps.	Duty factor %
Hoist motor									
Auxiliary hoist									
Travel motor - main-trolley									
Travel motor - aux.-trolley									
Main travel									
Slewing									
Luffing									

Mark with an "E" any motor that may be in simultaneous operation.
